## DETAILED ACTION

### *Election/Restrictions*

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1-15, drawn to methods of manufacturing a magnetic recording medium.

Group II, claims 16-17, drawn to an apparatus for manufacturing a magnetic recording medium.

The inventions listed as Groups I do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The term "special technical features" is defined as meaning those technical features that define a contribution which each of the inventions considered as a whole, makes over the prior art. The claimed method for manufacturing a magnetic recording medium, patterns the magnetic layer by etching, for example, ion beam etching. Page 16-17 of the specification includes the following passage (with emphasis added):

*The present exemplary embodiment relates to a manufacturing method of a magnetic recording medium, which processes an object to be processed as a starting body of a magnetic recording medium shown in Fig. 1, by dry etching or the like so as to process a continuous recording layer in a shape of a servo pattern (not shown) including a predetermined line and space pattern, as shown in Fig. 2, and contact holes, thereby dividing the continuous recording layer into a number of divided recording elements. The present exemplary embodiment has features in a technique for processing the continuous recording layer, materials for a mask layer and a resist layer which cover the continuous recording layer,*

*techniques for processing those layers, and the like. Moreover, the present exemplary embodiment has a feature in a manufacturing apparatus of a magnetic recording medium for performing the above processing techniques of the continuous recording layer and the like to mass-produce the magnetic recording medium. **Except for those points, the manufacturing method and the manufacturing apparatus of the present exemplary embodiment are the same as a conventional manufacturing method of a magnetic recording medium and a conventional manufacturing apparatus of the same.***

“Those points” that applicant believes to be the inventive aspect of the invention are not articulated in method claim 1. As such, a conventional apparatus can be used in carrying out the method of claim 1. Therefore, the two groups lack a special technical feature.

#### Election of Species

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The following species are recited in claim 10 wherein the claimed second mask layer is:

a) formed to be sufficiently thin;

or,

b) is formed of a material having a higher etching rate in the continuous recording layer processing step than that of the continuous recording layer,

Art Unit: 1763

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).
